DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 5, 11-13, and 28 drawn to a needle protection device having a housing with a longitudinal opening formed by first and second lip angled toward the interior of the housing with varying angles, classified in class 604, subclass 110.
 - II. Claims 17-22, and 29-44 drawn to a needle device having a sheath with at least one internal spline, classified in class 604, subclass 187.
2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions the needle protection device of group I can be used with a substantially different hub and sheath than that of group II, and the needle protection device of group II can be used with a substantially different housing than that of group I.
3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
